

Cognos Analytics Folder Approvers & Responsibilities

Wendi Lewis - 2024-11-22 - Comments (0) - Cognos Analytics

Cognos Analytics is a folder-based application. This means [users request access to a folder\(s\)](#) that contains the reports they need.

Folder Approvers

Each folder has a set of data stewards who approve (or deny) [Cognos Analytics access requests](#).

| Folder | Package | Primary Approver | Backup Approver |

Approver Roles

Folders typically have a set of 2 [approvers](#)—data stewards who will review a folder request and determine if it is appropriate to grant access to the individual requesting it. If the folder accesses multiple data sources, there may be additional folder approvers.

- **primary approver**

main person who will approve (or deny) the request for access to the folder and related data

- **backup approver**

secondary person who will serve as the approver when the primary approver is unavailable (i.e. out of the office)

NOTE: If a folder provides access to multiple packages (data sources), a folder may have 2 approvers for each additional package.

Approver Responsibilities

1. Coordinate With Your Primary and Backup Approver Partner

If you are the primary approver, coordinate with your backup approver to approve requests when you will be out of the office.

2. Review Requests in a Timely Manner

The person requesting the folder may need access to the data to do their job. Be mindful not to delay in reviewing the request.

3. Consider if the Request is Appropriate

You must determine if it is appropriate to grant access to the user requesting the folder and the reports and data it contains. Come to agreement with your primary and backup approver partner on the criteria necessary to make an approval.

You may want to consider the following criteria.

| User criteria | Description |
|--|--|
| Department | Some folders are intended only for users in a specific department(s). For example, the Registrar folder is only granted to users who work in the Office of the Registrar. |
| Has the user been granted access to a related application? | Some reports require the user to have access to the application where the underlying data originates. For example, to gain access to the Departmental Reports folder for academic departments, the user first needs to have access to Banner. |
| Position | Some content is intended for users in a certain level in the organization. For example, the OSP Senior Management reports may not be appropriate for an administrative assistant. |

4. Approve or Deny a Request

You (both the primary and backup approver) will receive an email when a new request is submitted. Only one of you should respond.

| Approval decision | Additional Action | What happens next? |
|--|---|--|
|  Approve | Reply all to the email with the word Approve . No further action from you is needed. | When all other folders requested on the ticket are approved, the request is sent to the Database Administration team for setup. Once setup is complete, the user will be notified. |

| Approval decision | Additional Action | What happens next? |
|--|--|---|
| <p style="text-align: center;">X Deny</p> | <p>1. Email the user directly and explain why the folder request is not approved.</p> <p>2. Reply all to the access request email with the following:</p> <ul style="list-style-type: none"> • Type the word "Deny." • Copy and paste the email you sent the user, so the ticket is documented with an explanation. | <p>Are there other folders requested in the ticket?</p> <ul style="list-style-type: none"> • No—Computing Accounts & Passwprds (CAP) cancels the ticket. • Yes—CAP removes the rejected folder from the request. When all other folders requested on the ticket are approved, the request is sent to the Database Administration team for setup. Once setup is complete, the user will be notified. |
| <p style="text-align: center;">Need more info</p> | <p>Reply to the email with additional information that you need in order to make a decision.</p> | <p>CAP will review your email and follow up accordingly.</p> |
