If your device is not an iPhone / iPad or an Android, the following instructions will help you configure your device. These instructions will work for Blackberry and Windows phones, desktop clients (email programs) such as Outlook and Thunderbird, and more.

1. Visit the following Google support article: Get started with IMAP and POP3
2. Choose "I want to enable IMAP"
3. From the list that appears, choose the device or client you would like to configure.
4. When following the instructions, remember to use your full Brown email address (e.g., Josiah_Carberry@brown.edu) as your username along with the password you chose for it.
