Connect macOS to Brown's Wireless Network

Stephanie Obodda - 2018-02-20 - 0 Comments - in Brown Wireless

If you're having difficulty logging onto the wireless network, make sure your username and password are working by going to https://myaccount.brown.edu and logging in. You can contact the IT Service Center for username and password issues or you continue to have issues connecting to the WiFi.

Go To wifi.brown.edu

While on Brown-Guest, connect to the wireless as shown below. Go to wifi.brown.edu and follow the onscreen steps.

**Brown (secure)**

Brown (secure) WiFi uses your Brown username and password. Make sure to use your username in all lowercase letters. Using an uppercase letter will cause an authentication issue.

**Eduroam**

Eduroam uses your Brown username@brown.edu and password. This is your short Brown username, not your Brown email address.
Troubleshooting

**Username and Password:** Make sure you can sign into sites like MyAccount by manually typing in your Brown username and password.

**Keychain:** If a password was mistyped or changed, Keychain will store that incorrect password. Go into Keychain Access to delete this stored information. Search for Brown and delete any 802.1X Passwords.

**Re-Add Network:** You may need to just re-do the setup process to get connected. Remove Brown from your saved networks list and remove the Brown profile by going to System Preferences -> Profiles -> select the Brown profile -> click the Minus Button "-" to remove it. Repeat the steps at the top of the article to connect.

**Malware:** Malware may prevent successful connection. You can try running MalwareBytes for Mac. If you need help with this, please visit the IT Service Center.

**Slow or Constant Connecting Issues:** There is a known issue that having both the Brown-Guest and Brown wireless profiles on your computer can cause issues. Remove Brown-Guest to resolve this.
