Connect to Brown's Guest Wireless Network

Stephanie Obodda - 2023-04-20 - Comments (0) - Brown Wireless

*The Brown-Guest network is available to all Brown Guests.*

---

**How to Connect**

1. Open the wireless settings on your device.
2. Choose the wireless network **Brown-Guest** from your list of wireless networks.
3. When you open a web browser, you will be prompted to agree to the terms to start using the internet.

Your connection will last for 7 days, after which you will be prompted to agree to the terms again.

If you have a Brown username and password, we recommend [connecting to Brown's secure wireless network](https://www.brown.edu) instead of the guest network. Brown's guest wireless network is not secure (unencrypted). Your bandwidth will be limited. You cannot access library resources, keyed software, and other restricted Brown resources.

**Browserless Devices (Gaming Systems, Printers, etc.)**

If you are member of the Brown community, you can connect browserless devices to the Brown-Guest network; these are devices that are unable to connect to Brown.

Instructions: [Connect a Browserless Device (e.g., gaming system, printer) to the Brown Network](https://www.brown.edu)
