

## Creating Personal Bookmarks in Panopto Videos

Kyle Sloane - 2020-08-24 - Comments (0) - Web and Online Media

*Users can bookmark specific times in a recording that you want to return to.*

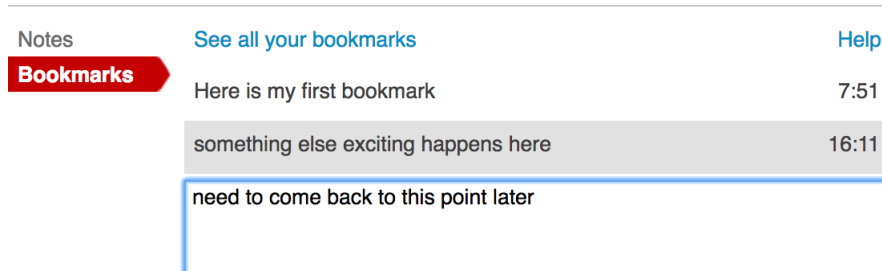

Upon logging in via [brown.hosted.panopto.com](https://brown.hosted.panopto.com) or through Canvas, click to view a video you'd like to bookmark.

On the left-hand side of the player, click on Bookmarks

The screenshot shows the Panopto interface with the 'Bookmarks' tab selected in a red pill-shaped button. To the right, a blue link says 'See all your bookmarks'. A tooltip box is open, containing the text: 'Bookmarks let you remember important moments in a video. Click on the bookmark icon to add a bookmark.'

Once you click the bookmark button Enter a note in the text box, and hit enter. This will save your bookmark.

The screenshot shows a list of bookmarks in the Panopto interface. The 'Bookmarks' tab is selected. The list contains three entries:

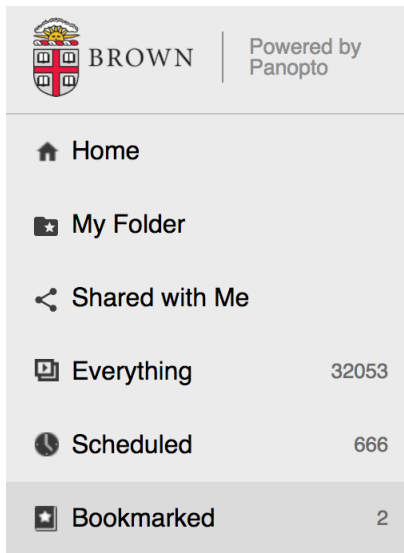

Notes	See all your bookmarks	Help
Here is my first bookmark		7:51
something else exciting happens here		16:11
need to come back to this point later		

The third entry, 'need to come back to this point later', is highlighted with a blue border, indicating it is the current selection.

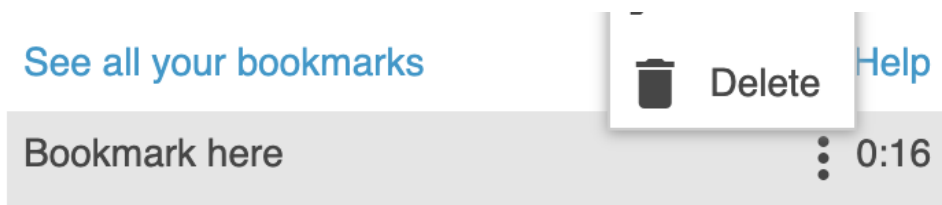

If you click on the "16:11" area you will move the session playback to this time. New bookmarks correlate to the current time location of the playhead.

You can add as many Bookmarks as you would like.

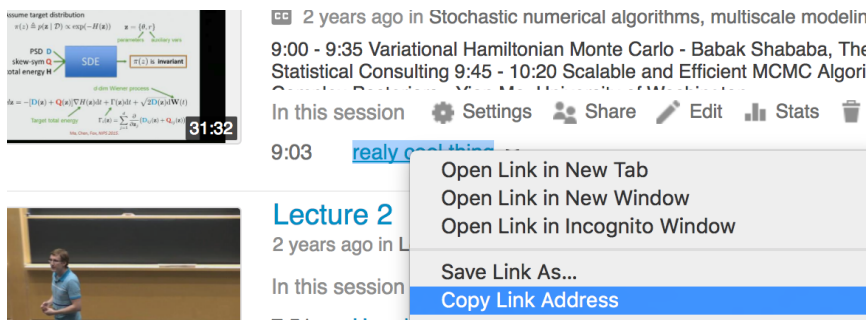

To return to your bookmarked spots in a video at a later date, return to the Panopto home page, you will now see a Bookmarked section that has the number of however many bookmarks you've created.

Click on one of the bookmarks you created. This will open the video and resume playback at the selected time you've bookmarked. You can remove a bookmark by clicking the three dots and selecting Delete or you can Edit the bookmark.

**Note:** You can send these bookmarked viewing URL's to other viewers. Just copy and paste the URL generated by your bookmark link by right clicking on the bookmark text and copying link address.
