

Disable Macros in Microsoft Software

Stephanie Obodda - 2016-03-25 - Comments (0) - Antivirus and Malware

For security reasons, make sure your Microsoft Office software is set to disable macros. The setting we recommend will disable macros, but warn you so you are aware. When you see the warning, you can enable macros on a case-by-case basis (only if you expect them to be present and you are absolutely certain they are legitimate!)

These instructions work for most versions. If your version is different, search the Help in the program for Macros.

Windows (and Macintosh Office 2016)

Recommended Setting: Disable all macros with notification

1. Click the File tab.
2. Click Options
3. Click Trust Center, and then click Trust Center Settings
4. In the Trust Center, click Macro Settings
5. Select **Warn before opening a file that contains macros**
6. Click OK

Macintosh (versions before 2016)

Recommended Setting: Warn before opening a file that contains macros

1. On the Word menu, click Preferences
2. Under Personal Settings, click Security
3. Check **Warn before opening a file that contains macros**
4. Click OK
5. Repeat for each Office software (Word, Excel, etc.)

Macro Security

- Warn before opening a file that contains macros
