SAS Installation Instructions

Tuesday Mueller-Harder - 2023-10-25 - Comments (0) - Installation Instructions

Attention: The file download, file verification and installation of SAS will be lengthy. It could take up to 1 hour or more for the entire process to complete. Please be patient.

If you are migrating from a previous version, it is recommended you review all vendor documentation and follow the steps for your current version.

1. Download the SAS installer using the link provided.
2. Right-click the downloaded file and select **Run as Administrator**.
3. Follow the on-screen prompts. The download and verification of the installer will take a long time due to its large size.
4. Once the SAS installer begins select **Install SAS Software**.
5. Accept default for SAS Home Directory.
6. Select **Install SAS Foundation and Related Software**.
7. Select which options you wish to install.
8. Once installed, the installer support files may be deleted to free up about 40GB of drive space. They can be found at **C:\BrownSW\SAS94M8**, or something similar depending on the installed version.
