BROWN

Introduction to LastPass

gillian bell - 2021-02-05 - Comments (0) - Security

LastPass is a password manager that makes your internet experience easier and safer by automatically providing strong, unique passwords for every online account. Use LastPass to generate secure passwords, remember them for you, and to seamlessly log you into websites.

Once you receive an account, you can create your master password. The same username and password unlocks your LastPass account on any device.

For a good introduction, we recommend the video "Getting Started with LastPass Enterprise":
