

Perform Bulk Changes to Your Content

Stephanie Obodda - 2024-07-03 - Comments (0) - Manage Content

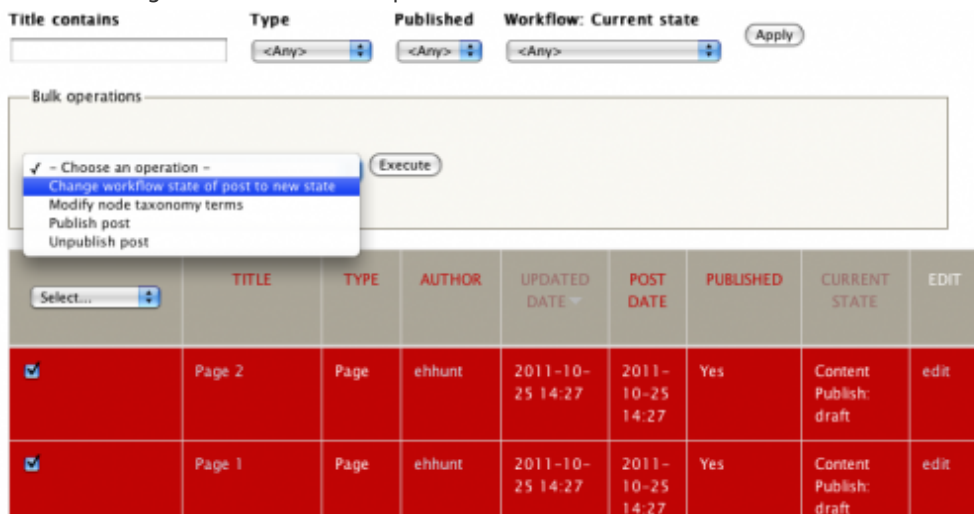

Bulk editing content

If your role has the permission to do so, you can check the boxes of multiple content items and then use the Update Options to make bulk changes, such as Publish, Unpublish or Delete.

Note: WebServices advises you to unpublish content rather than delete it. Deleted content is gone forever and WebServices cannot retrieve it.

Bulk publishing changes

1. From the administration menu, select Manage Content.
2. Select the pages and/or news items whose status you wish to change. (You may wish to filter the content to find the pages and news items more easily.)
3. Find Bulk Operations in the array of drop-down menus.
4. Select "Change workflow state of post to a new state" and click "Execute".

The screenshot shows the Bulk Operations interface. At the top, there are filters for "Title contains", "Type", "Published", and "Workflow: Current state", each with a dropdown menu set to "<Any>". An "Apply" button is to the right. Below the filters is a "Bulk operations" section with a dropdown menu showing options: "Choose an operation -", "Change workflow state of post to new state", "Modify node taxonomy terms", "Publish post", and "Unpublish post". An "Execute" button is next to the dropdown. Below this is a table with columns: TITLE, TYPE, AUTHOR, UPDATED DATE, POST DATE, PUBLISHED, CURRENT STATE, and EDIT. Two rows are visible, both with checkboxes checked in the first column.

	TITLE	TYPE	AUTHOR	UPDATED DATE	POST DATE	PUBLISHED	CURRENT STATE	EDIT
<input checked="" type="checkbox"/>	Page 2	Page	ehhunt	2011-10-25 14:27	2011-10-25 14:27	Yes	Content Publish: draft	edit
<input checked="" type="checkbox"/>	Page 1	Page	ehhunt	2011-10-25 14:27	2011-10-25 14:27	Yes	Content Publish: draft	edit

5. A new page will load: select the desired target state, "publish" or "draft".

Content Publish
draft
✓ public

Please select that state that should be assigned when this action runs.

Message:
Action set %title to %state.

This message will be written into the workflow history log when the action runs. You may include the following variables: %state, %title

Cancel

6. If you wish to add a comment to the workflow logs (visible from the Workflow tab of each page), add it.
7. Click "next".
8. A new page will load: confirm your changes.
