

Relink a Cognos Analytics Report View to the Source Report

Wendi Lewis - 2024-03-05 - Comments (0) - Cognos Analytics

A report view can **lose the link to the source (parent) report** for a variety of reasons. When this happens the report view appears greyed out.

<input type="checkbox"/>	Name
<input type="checkbox"/>	training reports
<input type="checkbox"/>	Report view of Codes and Descriptions
<input type="checkbox"/>	New dashboard
<input type="checkbox"/>	Codes and Descriptions

If the report view has a schedule, then the schedule will begin to fail with the following error:

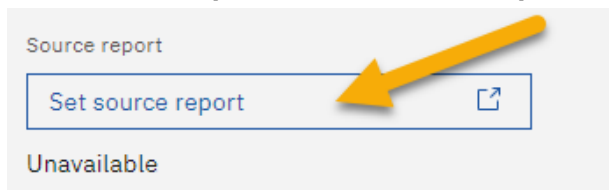

RSV-BBP-0024 The report view '[ID, folder path, and report name]' has no source report.

Relink a Source Report to a Report View

If you know the name and location of the source report, it's easy to fix in the report view properties.

TIP: Usually, the report view name refers to the source report name: "Report view of [source report name]" or "My [source report name]"

1. From the report view **Action menu**, select **Properties**.
2. Under **Source report**, click **Set source report**.

3. In **Team content**, navigate to the source report folder, select the source report, and then click **Open**.

The Source report field shows the name of the source report instead of Unavailable.

4. Click **Save**, and then click **Close**.

The report view appears active and you can run it—if applicable, the schedule resumes running.
