

Troubleshooting Rosetta Stone Log-in Issues on Mobile

Kyle Oliveira - 2019-05-31 - Comments (0) - Rosetta Stone

A recent update to the Rosetta Stone apps on both iOS and Android may cause authentication issues. Please refer to the information below for resolving these issues.

iOS

To prevent any further issues regarding logging into the app on iOS, you must avoid opening the app unless you've authenticated through Brown's log in portal. Opening the app outside of logging in through Brown, will most likely result in the inability to log in and use the app. If you are having issues logging into it:

Solution 1

1. **Open** your device's web **browser**, visit rosettastone.brown.edu, and log in
2. Click the "**Launch Rosetta Stone Language Lessons**" link to launch the app
3. You will experience the same problem as in the past - you will just see a "splash" screen instead of being logged in. On this screen, click **Enterprise And Education Learners**.
4. On the login screen that appears, type **three random values** (just a single letter will work) into the Username, Password, and Namespace fields.
5. You will see an error message. Click **Try again** and proceed with the next step.
6. Return to your web **browser** and again, visit rosettastone.brown.edu.
7. Click the "**Launch Rosetta Stone Language Lessons**" link to launch the app again.
8. Wait for the login to proceed - it should work. If you still see the error message, click the **Try Again** option.

Solution 2

1. **Remove** the Rosetta Stone app
2. [Clearing Safari cache](#) may be necessary as well.
3. **Restart** device
4. **Re-download** the Rosetta Stone app. Do not open it!
5. Open Safari on your device and visit rosettastone.brown.edu.
6. Log in
7. Click on the "Launch Rosetta Stone" link
8. The app will launch. You may see a generic sign-in screen with a video playing - do

not click anything, just wait. It may take a few minutes for the login to work.

Android

You may be getting an error on Android devices when attempting to authenticate. This occurs if you open the app without having authenticated through Brown. There are two ways to fix this issue if you receive an error when launching the app through Brown:

Solution 1

1. Open the Rosetta Stone app and tap on the **Enterprise and Education Learners** button.
2. Switch to your browser app and sign into Brown's Rosetta Stone page and click on **Launch Rosetta Stone**
3. This should switch you into the Rosetta Stone app without error.

Solution 2

1. Go into the **Settings** app.
2. Go to the **Apps** section.
3. Find Rosetta Stone app; it should be listed as **Languages**
4. Tap on the app and tap on **Force Stop**
5. Tap on **Storage**.
6. Tap on **Clear Cache**.
7. Attempt to then launch the app through Brown's Rosetta Stone page.
