Use Two-Step Verification When Traveling
Stephanie Obodda - 2020-11-13 - 0 Comments - in Two Step Verification

If You Have a Smartphone
A smartphone can be used to verify your login while traveling even if you do not have a data or internet connection. Here’s how:

1. Open the Duo Mobile app
2. Click the key icon next to your Brown account

   ![Duo Mobile App](image)

3. The displayed code is a one-time use code that you can use as a passcode when prompted by Two-Step.

   ![Enter Passcode]

   ![Enter Passcode]

   - Again, this does NOT require any data or connectivity, it can be done when your phone is offline.
   - If you change your SIM card to an international SIM, this method of using two-step will continue to work without additional setup. However, other methods (like texting or phone call) will understandably stop working if you have a new SIM card.

If You Have an International Number
You can register for Brown's Two-Step Verification with an international number.

It should be entered with a + in front of the country code. For example, a German number
may look like this:

**Device Name:**

**Phone number:**

- Use Two-Step Verification with a Token
