

## Use Two-Step Verification with a Token

Stephanie Obodda - 2022-02-02 - Comments (0) - Two-Step Verification

Don't have a smartphone? Travel extensively? You might want to use Brown's Two-Step Verification with a token.

What is a Token?

A "token" is a keychain-sized device. If you push the button, it displays a number for you to type into the Two-Step Verification prompt.

Every time you press the button, a different number is displayed. Once you use the displayed number to verify, it cannot be reused. This is an offline device - no cell or data connection is required.

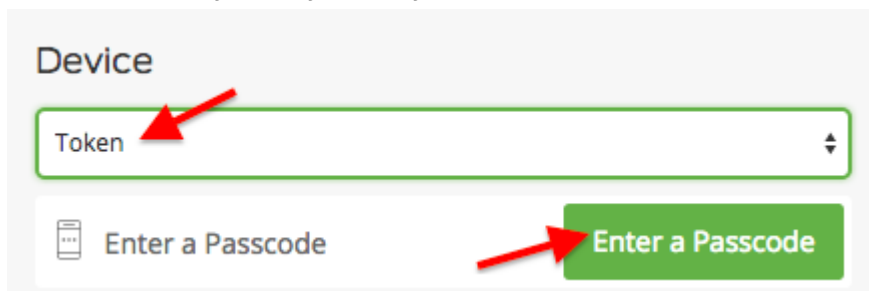

How to Get a Token

You can visit Brown's [IT Service Center](#) to pick up a token. They will set it up and add it to your account.

How to Use a Token

To use a token:

1. After entering your username and password on a Brown single-sign-on page, you'll see the Duo prompt.
2. Choose Token as your way to verify

Device

Token

Enter a Passcode

Enter a Passcode

3. Click Enter a Passcode
4. Press the button on your token. A number will display.

5. Enter the number you see into the passcode area, and click Log In.

A screenshot of a login form titled "Device". It features a dropdown menu with "Token" selected. Below the dropdown is a passcode input field containing the number "947153", with a red arrow pointing to it. To the right of the input field is a green "Log In" button, which is circled in red.

Tip: check the "Remember me for 30 Days" to avoid being prompted for 30 days on your computer's browser.
