User Roles And Permission Levels

Stephanie Obodda - 2019-05-01 - Comments (0) - Users and Permissions

Everyone who is able to log in to BrownSites is assigned a role for their site. The role determines what permissions they have -- can they add content? Publish to the world? Edit content that others have submitted?

The roles are listed below in order of least to most access.

Editor

- can create content
- can edit all content
- can publish all content
- can edit menus
- every department needs one

Site Owner

- same permissions as Editor, and
- can make requests to WebServices when there are problems, issues, or a need for custom work with their site
