

Using Windows MBox Viewer to view MBOX files

Kyle Oliveira - 2025-01-30 - Comments (0) - Email and Collaboration

1. Download the zipped folder that contains the email and extract them.
 1. It would be best to move the .mbox files into their own folder in a permanent location.
2. Download MBoxViewer from [here](#).
3. Extract the ZIP folder that contains the executable.
4. Run the **mboxview.exe** file.
5. Accept the default settings.
6. Go to **File > Select folder...** and navigate and select the location of the folder that's holding the .mbox files.
7. Click OK when the folder is selected.
8. The .mbox files will appear in the left-column. Click them to view their emails.
 1. The first time when opening an .mbox file, it will take a few moments to load the email.
 2. You may be asked additional setup questions, selecting the default options should be okay.
